Features and Benefits

Stanley's CS11 hydraulic chain saw offers the highest power to weight ratio of any chain saw on the market today. The wide range of flow and pressure makes them well suited to run from a variety of equipment and plant.

Safety has been designed in with interlocking triggers, bucking spurs and hand guards. Its robust design and high torque gear motor provides instant chain speed.

The hydraulic power does not require a flywheel to smooth out the power pulses so there is no chain coasting when you release the trigger. Kick back is all but eliminated without the flywheel used on petrol or gas driven saws.

The CS11 hydraulic chain saw is designed for extreme duty applications. There is a range of bar and chain sizes available to suit upto 42" or 106cm.

The CS11 can handle a wide range of application from bridge pilings to utility poles through to greenheart marine structures, such as piers and dock timbers as well as general wood cutting or timber processing.
